

Bluesky Elements

What is it?

Bluesky Elements is our own in-house component library built using :

- custom html elements
- template tags
- and Petite Vue

Aims

Some of the core aims for the library are :

- re-usability
- save time
- design to dev workflow
- flexibility and customisation

Complex and/or time-consuming logic or styles (e.g header navs, js widgets etc) can be created, tested, and iterated on, and we all will have access to our best collective work inside these off-the-shelf components.

Demo : Used List

Features

- Custom HTML class
 - Auto set up
- Templates
 - Vue syntax
 - benefits over vb e.g dynamic class binding - reactive
 - Can do a lot inside the templates alone with no extra js!
- Dir Structure
 - 2 parts
 - Templates
 - Component Logic

Demo

- Attribute Helpers

Demo

- CLI Tool paste and component create

Other Demos pt1

- Hero banner
 - slider
 - slide + video variant
- Video bg banner
 - height attribute

Other Demos pt2

- Offers
 - card + variant
 - inline offer cards
- Part Ex
 - section + variant

Other cool stuff

- CLI Tool
 - pull
 - push
 - list
 - paste
- Repo GH Codespaces
